KIZA-AGRI Rwanda: Hackathon Submission Pack

NISR 2026 Big Data Hackathon | Catholic University of Rwanda (CUR), Computer Science | Deadline: **30 October 2026**

1. Where to submit

Submission form: https://statistics.gov.rw/form/2026-hackathon-submission-form

2. What to submit (copy into the form)

Item	Value
Deployed app link (Render)	https://kiza-agri-rwanda.onrender.com/
Public GitHub repository	https://github.com/call76/kiza-agri-rwanda
Documentation	README.md in the repository (data, message, how to interact, run, deploy)
Login required? Sample credentials	Email: farmer@kiza.rw Password: Kiza@2026-demo (no guest mode)
Other roles (same password)	buyer@kiza.rw, advisor@kiza.rw, officer@kiza.rw, gov@kiza.rw, admin@kiza.rw

3. Repository checklist (at least 5 files, per the webinar)

Required	In this repository
README explaining data, message, interaction	README.md
Script(s) that run on any machine	app.py, db.py, loaders.py, requirements.txt, render.yaml, Procfile
Video, max 3 min, desktop recording	demo/demo.webm (2:10; follows the README: install, login, tour)
Data folder + link to data	data/ (CSV templates, sample prices, NISR_README.md)
Student cards of both members	student_cards/student_cards.pdf

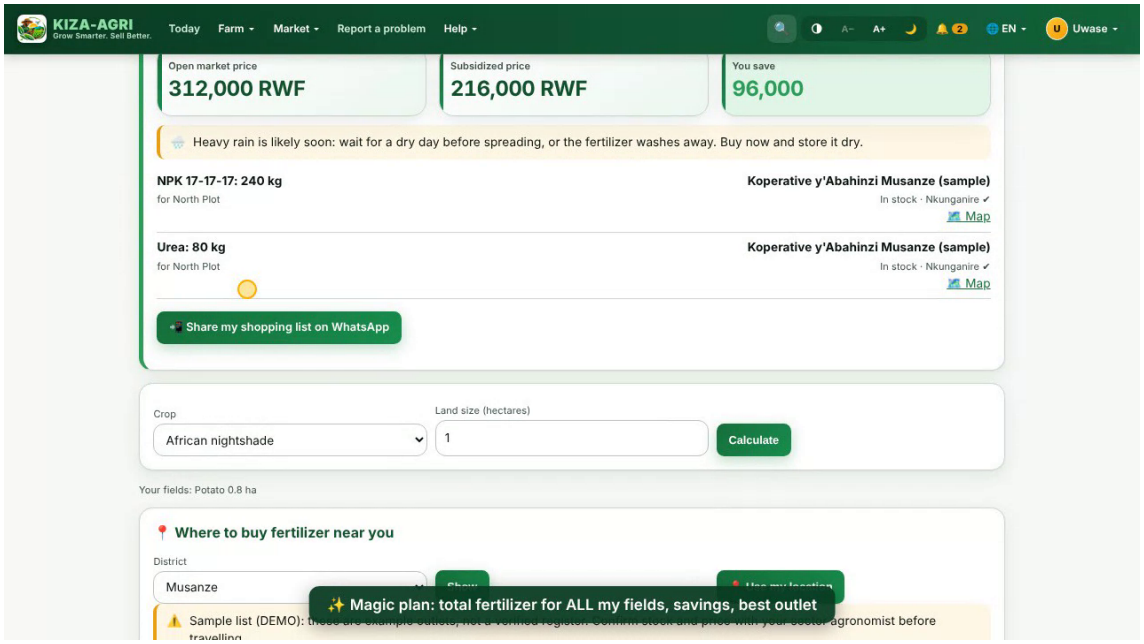

4. Team and contacts

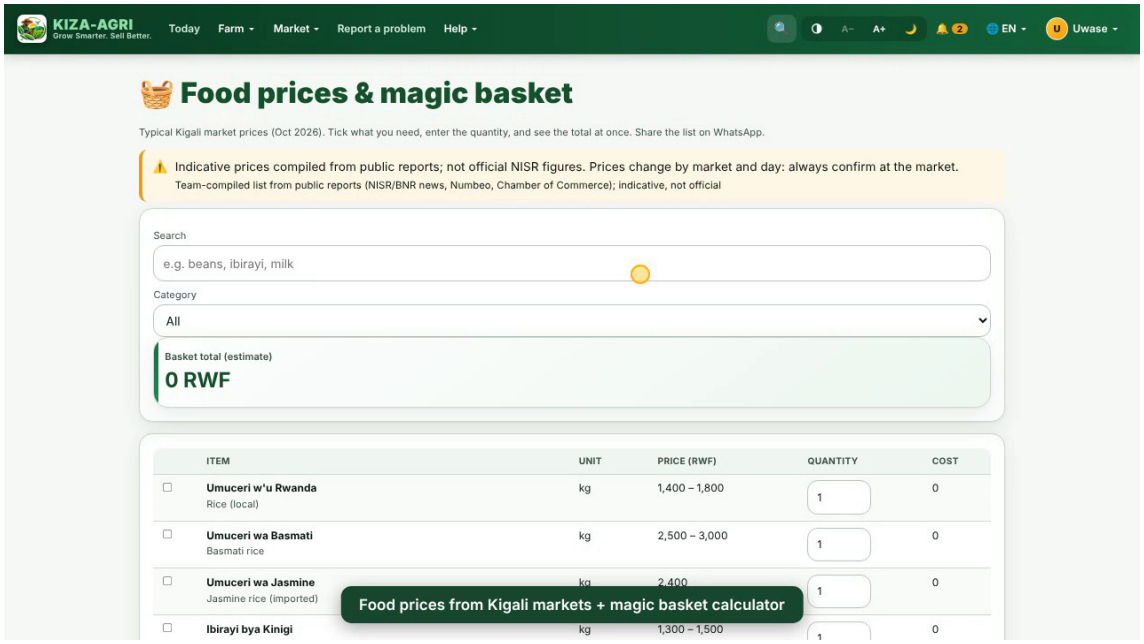

Member	Reg. No	Email	Phone
Rukundo Callixte	1CUR25AK010978	rukundocallixte1@gmail.com	+250 792 409 274
Nshimiyimana Jean Damascene	1CUR25AK011289	dnshimiyimana252@gmail.com	+250 794 467 989

5. New feature: Find fertilizer (cooperatives near the farmer)

A farmer who needs fertilizer opens **Today > Find fertilizer** (or */fertilizer#where*) and immediately sees the **cooperatives and agro-dealers in their district**, with stock status (In stock / Low / Out), whether the Nkunganire subsidised price is offered, and a tag for outlets in the farmer's own sector. **Magic plan**: totals the fertilizer for all fields, shows the saving, the best in-stock outlet per fertilizer, a rain-aware apply-or-wait tip and a WhatsApp shopping list; **Use my location** finds the district by GPS. After calculating the fertilizer needed for a crop and field size, each outlet shows which needed fertilizers (DAP, Urea, NPK) it does not list. API: */api/fertilizer/outlets*. Also new: **Food prices** (78 Kigali market items, pumpkin 1,500 RWF/kg) with a basket calculator and WhatsApp share, and real photos loaded live from Wikimedia Commons with credits. **Honesty note:** the outlets shipped are labelled DEMO samples; admins load the real register via Admin > Data > fertilizer_outlets (DEMO

rows are rejected).

6. Final checks before submitting

1) Push the latest code to GitHub (public repo). 2) Render redeploys automatically; wait until it shows 'Live'. 3) Open the app link in a private window; the free tier sleeps after 15 minutes and needs about a minute to wake. 4) Log in with the sample credentials and open Find fertilizer. 5) Open the link again shortly before the deadline so it is awake. 6) Fill the form and submit.
